

## Gas processing facility construction, west of Lake Broadwater

3 June 2022

Arrow is constructing gas processing infrastructure near the Shell-QGC Harry Field Compression station off Schultz Road, west of Lake Broadwater.

---

*The Harry Inlet Processing Facility (IPF) will be built as part of the initial phase of the [Surat Gas Project](#). Once constructed, the Harry IPF will enable Arrow to supply gas from its operational fields under a gas sales agreement.*

---

Over the next three months, there will be a temporary increase in light and heavy vehicle movements along Broadwater Road and Schultz Road to allow for the transport of gravel from a local quarry.

Truck movements will be in daylight hours only. Traffic plans are in place to manage the increase in road use and water trucks will be used for dust suppression during the move, where necessary.

Daytime construction activities are expected to continue through to the end of 2022. The community will be updated as work progresses.
