Maintenance notice McNulty Inlet Processing Facility

Arrow Energy will be carrying out **scheduled maintenance** at the McNulty Inlet Processing Facility (IPF) from **Monday 18 May – Thursday 21 May 2026**.

What to Expect

During this time:

- The facility will be temporarily shut down to enable safe maintenance
- A safety flare will be used to remove gas from the facility
- Nearby residents may notice:
 - A visible flare or glow, depending on weather conditions
 - Minimal noise or light impacts

Why This Work Is Important

- Regular maintenance is essential for safe and efficient operations
- Flaring is a standard safety process required under the *Petroleum & Gas (Production and Safety) Act 2003*
- Controlled flaring has significantly lower environmental impact — around 10 times less than venting gas directly

Location

📍 **McNulty IPF**
Off Gosper's Road, Columboola
